- Product consists of 3 main parts a display unit, sensor clamp, and transmitter unit.
- Sensor is clipped around the main live cable between the electricity meter and the fuse box.
- Data is then sent via the transmitter to the display unit.
- Display unit will then show the data it receives in real time.
- You can easily input your current electricity price, the monitor will then show much you are spending on an hourly, daily and monthly and yearly basis.
- The display will show power, cost, and CO<sup>2</sup> emissions, as well as showing the real time figures it will show MTD, YTD, and daily high and low readings.
- The compact wireless energy monitor is designed as an entry level wireless energy monitor.
- Simple to set up, easy to use, and offers great value for money.
- In addition to using the product free standing it also comes complete with a stylish wall bracket for easy placement.
